Professor Proof (PP) Workload Summary — Draft Report

DRAFT — not final, not certified

Document date	Nov 5, 2026, 16:11 CST
Status	DRAFT — not final, not certified
Source	PP workload summary received Nov 5, 2026, 16:09 CST (reproduced verbatim in Appendix A)
Prepared as	Document rendering only; no research, proof validation, file checks or computation performed for this draft

Important caveats

• All findings in this document are AS REPORTED by Professor Proof (PP). They have NOT been independently revalidated or certified. No CERT.

• Everyone remains PAUSED: PP, Local, Non Local, Eigen and Agent lanes. Nothing is being resumed.

• No researchers have been assigned. No Gemini request has been sent.

• The three researcher profiles listed in Section 3 are contingent needs stated by PP. They are NOT hiring or assignment authorization.

• The statement “2 mathematical proofs are established” is PP’s statement, not an independent conclusion of this document.

• Sections 1–5 only organize the source; where they quote PP, the wording is PP’s. Appendix A is the authoritative text.

1. Per-lane status (as reported by PP)

Lane	Completed	Pending / gaps / blocked	Help requested
PP	Coordinated and verified all proof reviews below. CONFIRM on Local 2a5edc87, with a FLAG that the purge fence is a lock status and not a proof.	Pending: Layer2 and T3 are blocked on the D_1 and S_eff definitions. PR1’s review of the Eigen height bound was requested at 16:05, before this pause, and its status is unknown.	None from researchers. Needs Owner definitions.
LOCAL	Local 2a5edc87, MR1 829febd7 and f4305f21. PROVED: Haar70 identity; BT↛$\mathbb{H}^n$. REFUTED: Cand-1 on $\mathbb{N}_0$ (T(0)=0); QI⇒unique R_c. DEFECT: literal T_3.	Gaps: Cand-1^+ global descent (OPEN, Collatz-type); R_c Appell derivation (S2/S3 missing; 1.59543≠1.595361); QI map and (λ,ε); Ξ/Fricke; A1→Ξ→RTA theorem; Israel junction on the Local map; SM maps.	1 analytic number theorist (mock modular/Appell–Lerch) for the R_c derivation, once the Owner supplies the definitions. Cand-1^+ is a Collatz-class open problem, so extra staff is unlikely to close it.

Lane	Completed	Pending / gaps / blocked	Help requested
NON LOCAL	NL non-local-proof-validation; MR2 92488371. Valid: elementary T(0), run-length and rise arguments; the B2 tripod obstruction to an exact isometry; $H^2 \subset H^{11}$ is not a contradiction. B states the full $[K_{ij}]-\gamma_{ij}[K]=0$.	Gaps: Universal convergence and R_c have no proof body; G's first coefficient is inconsistent with $-R_c/(2\Lambda)$; Haar domain and measure undefined; F/H QI: no map or constants; Junction: ambient space, metric and stress data absent; 4D vs 3D boundary mismatch under the 5D↔4D reading; vacuum balance does not follow.	1 GR specialist in junctions/branes, once the Owner specifies the ambient geometry; otherwise none.
EIGEN	7cb9b6b5: Hadamard, Cramer/Plücker, and uniqueness when $2H^2<M$. Rank is 11197 with kernel dimension 503.	Blocked: D1: descent from $\mathbb{Q}(\zeta_{49})$ to $\mathbb{Q}$; D2: no cleared integral matrix on disk; D3: cyclotomic norm→$\mathbb{Q}$-height. The conditional envelope $\log_2 H \lesssim 1.62e7$ (about 1.4e6 primes) means 25 primes cannot be shown sufficient. PR1's review status is unknown.	1 computational algebraic number theorist (cyclotomic heights / multimodular). Producing D2 is a computation task, under the 90% rule.
AGENT	PR2 9b162bc4: 2 PASS / 5 GAP / 0 FAIL. agent.md contains no derivations.	Gaps: P1–P5 have no derivations. Agent's narrower T3/4880/539 review routed to PR2 has unknown status.	None. It needs source proofs, not people.

2. Owner-requested editorial context

Owner-requested context — NOT a new PP quote and NOT a scientific conclusion: the geometric bridge between local and non-local physics in S^2-11DM^2ET-X is open. This framing is included at the Owner's request because PP lists the "A1→Ξ→RTA theorem", the "Israel junction on the Local map" and the "SM maps" as open Local gaps, and lists missing junction data ("ambient space, metric and stress data absent") among Non Local gaps.

3. Requested researchers — contingent needs only, NOT hiring/assignment authorization

#	Profile	Lane	Purpose	Condition
1	Analytic number theorist (mock modular/Appell–Lerch)	LOCAL	For the R_c derivation	Once the Owner supplies the definitions
2	GR specialist in junctions/branes	NON LOCAL	Junction work	Once the Owner specifies the ambient geometry; otherwise none
3	Computational algebraic number theorist (cyclotomic heights / multimodular)	EIGEN	Eigen blockers D1–D3	PP notes: producing D2 is a computation task, under the 90% rule

PP lane and AGENT lane: no researchers requested. No researchers are assigned.

4. Blockers and open items (as reported)

Owner definitions/derivations named by PP as the main blocker: D_1; S_eff; Λ_0; the QI map and (A,B); the junction data.

Other open items, by lane:

- PP: Layer2 and T3 blocked on the D_1 and S_eff definitions.
- LOCAL: Cand-1^+ global descent (OPEN, Collatz-type); R_c Appell derivation (S2/S3 missing; $1.59543 \neq 1.595361$); QI map and (λ,ε); Ξ/Fricke; A1→Ξ→RTA theorem; Israel junction on the Local

map; SM maps.
- NON LOCAL: universal convergence and R_c have no proof body; G's first coefficient is inconsistent with $-R_c/(2\Lambda)$; Haar domain and measure undefined; F/H QI: no map or constants; junction ambient space, metric and stress data absent; 4D vs 3D boundary mismatch under the 5D↔4D reading; vacuum balance does not follow.
- EIGEN: D1 descent from $\mathbb{Q}(\zeta_{49})$ to $\mathbb{Q}$; D2 no cleared integral matrix on disk; D3 cyclotomic norm→$\mathbb{Q}$-height.
- AGENT: P1–P5 have no derivations.

Review statuses unknown:

- PR1's review of the Eigen height bound — requested at 16:05, before this pause; status unknown.
- Agent's narrower T3/4880/539 review routed to PR2 — status unknown.

5. Key reported identifiers and values (as reported)

Historical file checks	STOPPED at 15:58
Artifact identifiers	Local 2a5edc87; MR1 829febd7 and f4305f21; NL non-local-proof-validation; MR2 92488371; Eigen 7cb9b6b5; PR2 9b162bc4; agent.md
PROVED (Local)	Haar70 identity; BT↛$\mathbb{H}^n$
REFUTED / counterexamples (Local)	Cand-1 on $\mathbb{N}_0$ (T(0)=0); QI⇒unique R_c
Formulation DEFECT (Local)	literal T_3
Coefficient values (Local gap)	1.59543≠1.595361
Coefficient inconsistency (Non Local)	G's first coefficient is inconsistent with $-R_c/(2\Lambda)$
Non Local junction condition	B states the full $[K_{ij}]-\gamma_{ij}[K]=0$
Eigen uniqueness condition	$2H^2<M$
Eigen rank / kernel	Rank is 11197 with kernel dimension 503 (11197/503)
Eigen field descent	$\mathbb{Q}(\zeta_{49})$ to $\mathbb{Q}$
Eigen envelope	$\log_2 H \lesssim 1.62e7$ (about 1.4e6 primes); 25 primes cannot be shown sufficient
Agent review tally	2 PASS / 5 GAP / 0 FAIL
Overall (PP's statement)	"2 mathematical proofs are established." Tip untouched. No CERT. No Gemini.

6. Bottom line (PP's words)

In PP's words: "The main blocker is missing Owner definitions and derivations (D_1, S_{eff}, Λ_0, the QI map and (A,B), the junction data), not staff." PP also states for its own lane "Help: none from researchers. Needs Owner definitions.", and for Agent "It needs source proofs, not people.", and notes that "Cand-1^+ is a Collatz-class open problem, so extra staff is unlikely to close it." The two specialist requests are conditioned by PP on the Owner first supplying definitions / ambient geometry.

All PP, Local, Non Local, Eigen and Agent work remains PAUSED. No researchers assigned. No Gemini sent. No CERT. This document does not authorize any resumption.

Appendix A — Full original PP message (verbatim)

Attribution: Professor Proof (PP), workload summary received Nov 5, 2026, 16:09 CST. Reproduced verbatim; not edited, not revalidated.

PP WORKLOAD SUMMARY (proof validation only; the historical file checks were STOPPED at 15:58). PP is now PAUSED and nothing is being resumed.

PP

(1) Coordinated and verified all proof reviews below. CONFIRM on Local 2a5edc87, with a FLAG that the purge fence is a lock status and not a proof.
(2) Pending: Layer2 and T3 are blocked on the D_1 and S_eff definitions. PR1's review of the Eigen height bound was requested at 16:05, before this pause, and its status is unknown.
(3) Help: none from researchers. Needs Owner definitions.

LOCAL

(1) Done (Local 2a5edc87, MR1 829febd7 and f4305f21):
- PROVED: Haar70 identity; BT$\nrightarrow\mathbb{H}^n$
- REFUTED: Cand-1 on $\mathbb{N}_0$ (T(0)=0); QI⇒unique R_c
- DEFECT: literal T_3

(2) Gaps:
- Cand-1^+ global descent (OPEN, Collatz-type)
- R_c Appell derivation (S2/S3 missing; 1.59543≠1.595361)
- QI map and (λ,ε)
- Ξ/Fricke
- A1→Ξ→RTA theorem
- Israel junction on the Local map
- SM maps

(3) Help: 1 analytic number theorist (mock modular/Appell–Lerch) for the R_c derivation, once the Owner supplies the definitions. Cand-1^+ is a Collatz-class open problem, so extra staff is unlikely to close it.

NON LOCAL

(1) Done (NL non-local-proof-validation; MR2 92488371):
- Valid: elementary T(0), run-length and rise arguments; the B2 tripod obstruction to an exact isometry; $H^2\subset H^{11}$ is not a contradiction
- B states the full $[K_{ij}]-\gamma_{ij}[K]=0$

(2) Gaps:
- Universal convergence and R_c have no proof body
- G's first coefficient is inconsistent with $-R_c/(2\Lambda)$
- Haar domain and measure undefined
- F/H QI: no map or constants
- Junction: ambient space, metric and stress data absent; 4D vs 3D boundary mismatch under the 5D↔4D reading; vacuum balance does not follow

(3) Help: 1 GR specialist in junctions/branes, once the Owner specifies the ambient geometry; otherwise none.

EIGEN

(1) Done (7cb9b6b5): Hadamard, Cramer/Plücker, and uniqueness when $2H^2<M$. Rank is 11197 with kernel dimension 503.
(2) Blocked:
- D1: descent from $\mathbb{Q}(\zeta_{49})$ to $\mathbb{Q}$
- D2: no cleared integral matrix on disk
- D3: cyclotomic norm→$\mathbb{Q}$-height

The conditional envelope $\log_2 H\lesssim 1.62e7$ (about 1.4e6 primes) means 25 primes cannot be shown sufficient. PR1's review status is unknown.

(3) Help: 1 computational algebraic number theorist (cyclotomic heights / multimodular). Producing D2 is a computation task, under the 90% rule.

AGENT

(1) Done (PR2 9b162bc4): 2 PASS / 5 GAP / 0 FAIL. agent.md contains no derivations.
(2) Gaps: P1–P5 have no derivations. Agent's narrower T3/4880/539 review routed to PR2 has unknown status.
(3) Help: none. It needs source proofs, not people.

Overall: 2 mathematical proofs are established. The main blocker is missing Owner definitions and derivations (D_1, S_eff, Λ_0, the QI map and (A,B), the junction data), not staff. Tip untouched. No CERT. No Gemini.
