order18 RESULTS
PREREG sha256 593a201649e7171e66bbe3f12d66d712ea6f94d5696d249ba66342497bd51121 (hashed before numerics; Maps RG3, RG4 hashed there).
test	value	verdict (preregistered rule)
C0 control (A0 fixed-M)	1.3e−15	PASS
Map RG3: Π−(A2_lit − A2_lines) = 0	6.9e−14	PASS
Map RG4: A2_lit = A2_lines + A2_corner	7.8e−15 (x and −1/x sets)	PASS
T, w = −½ (primary, weight-½)	r = 0.210	**FAIL**
T, w = −1 (weight-1 induced)	r = 0.058, κ ≈ 0.998	FAIL
T, w = 0	r = 0.503	FAIL
Zero guard: ‖A2c(−1/x)‖/‖A2_lit(−1/x)‖ = 0.997, so target is nonzero and T is discriminating.
All outcomes match the written predictions.

Category A content (argued in PREREG (a)–(d), confirmed numerically)
- A2(S^o) = 0: the P-odd sector has no t^0 coefficient after removing line terms (completion and wall corrections contribute nothing at t^0).
- A2 is fully explicit: A2 = A2_lines + Σ_r f_r[B̄1(ρ1/N)B̄1(ρ2/N) + ½B2(ρ1/N) + (7/4)B2(ρ2/N)].
- A2c := A2 − lines − completion = A2_corner is P-even and nonzero, and satisfies no pure fixed-M law at w ∈ {−½, −1, 0}.
RG3/RG4 are residual-internal maps with preregistered passes; they are not Residual↔Resonant bridges.

order18 NOTES
- Run order: PREREG (with Maps RG3, RG4) hashed → a2.py hashed → one run (~20 min) → verdicts recorded. No post-hoc runs.
- Proof status: (a)–(d) in PREREG are written arguments (iterated Euler–Maclaurin, paper Lemma EM1); they are Category A in substance but not yet written to paper standard. Not folded into a v6 paper in this stage.
- Observation, post-hoc and not tested: at w = −1 the best scalar is κ ≈ 0.998 with r = 0.058. A weight-1 law at order t^0 should be affine, picking up A0 terms from the factor τ = x + it and from Im(−1/τ) = t/(x²+t²). Candidate for order19 (to be preregistered): A2c(−1/x) = x·35^{−1/2}M A2c(x) + c·M A0(x) with a fixed c from the exact expansion.
- Steering applied: no Resonant-side (T3 / O_res / Π) object was used or invented; Maps E1–E3 remain OPEN. No bridge claim. Framing stays opinion.
- Data read-only from order4b (A2 by the order3c formula). Phase code shared with lib2 (order2).
- nice, OMP_NUM_THREADS=1, <3 GB; no push/sends; new files only.
