order48 RESULTS: v11 Theorem xinv predictions

PREREG sha256 845d14430b96930a32b743180042982caf3521d1e11921f266cca10b5b2582ed (hashed before numerics). 48 reciprocal pairs from the stored grid (no new evaluation).

object	max rel error vs prediction	verdict
C11	1.0e−14	PASS
C2a	3.2e−13	PASS
C2b	7.0e−13	PASS
CO (A2_corner)	1.8e−14	PASS
LN (contrast, no prediction)	4.8e−15	also satisfies it

These are numerical checks (Category B) of a theorem that is Category A (v11). They are blind for C11, C2a and CO. LN also satisfies the identity; this suggests the line weights meet the hypothesis, but that is not proved here.

No v12. Open next: (1) prove LN meets the real-weight hypothesis and add it to the theorem; (2) the near-law size (why ‖R‖ is small) is still open.

order48 NOTES

Naming: RG* only, no labels L1–L7; "36" only as dim V. MAPS_CANDIDATES untouched; no Resonant objects; no bridge claim; CORE_FREEZE; no push or sends; new files only.
