test	value	verdict
C1 corner formula reproduces CO, SCO	0.0	PASS
C2 transport $\Gamma_\gamma^{\pm1}\cdot CO = Cor_{\gamma^{\mp1}K}$ $(x, -1/x)$	1.6e−14	PASS
C3 commutator $\|\Gamma_\gamma M - M\Gamma_\gamma\|$	0.0	(reported)
reference: CO under the law	abs 54.4, rel 0.0586	FAIL (order19)
RG12 γ-average $\frac{1}{3}(Cor_\gamma K + Cor_K + Cor_{\gamma^{-1}}K)$	abs 23.5 ($\|S\|$ 607), rel 0.0387; non-vacuity 1.07	**FAIL**
RG13 γ-defect $Cor_{\gamma^{-1}}K - Cor_K$	abs 104.1 ($\|S\|$ 1489), rel 0.0699; non-vacuity 1.60	**FAIL**
RG14 full-orbit average (Γ_γ has order 2; rank Π = 60)	abs 15.9 ($\|S\|$ 554), rel 0.0287; non-vacuity 0.60	**FAIL**

Reading
Neither γ-construction explains the near-law. Averaging over the γ-orbit lowers the relative defect (0.059 → 0.039 → 0.029) but never below the 1e−3 FAIL line. Because Γ_γ commutes with M and has order 2 on the companions, every γ-average's defect is the image of the CO defect under a polynomial in Γ_γ; the full-orbit projector keeps 60 of 105 dimensions and the defect has a nonzero component there.

Category A / B
- A (finite exact facts, stated): transport (v8 Prop. transport); Γ_γ has order 2 on the 105 companions and commutes with M (both checked to machine zero on monomial matrices; an exact exponent check would make them formal); hence $Cor_{\gamma^{-2}K} = Cor_K$.
- B: all law residuals.

No v9 (no substantial new theorem).

order24 NOTES
- RG14 was added after the RG12/RG13 verdicts (disclosed), hashed before its run, motivated by C3.
- $\Gamma_\gamma^2 = I$ and $[\Gamma_\gamma, M] = 0$ were checked in floating point on monomial / root-of-unity matrices (max error 0); to put them in the paper they should be re-checked on exponents mod 9800 (cheap). Not done here.
- Structural consequence: the γ-orbit cannot remove the law defect of A2_corner; only its Γ-invariant part matters, and that part still fails at 2.9%. The geometric γ-route to the near-law is closed for linear averages over the orbit.
- Lock: MAPS_CANDIDATES untouched; no Resonant objects; no bridge claim; no Residual↔Resonant candidate arises. E1–E3 OPEN. Ξ not identified.
- nice, OMP_NUM_THREADS=1, <3 GB; ~40 s; no push/sends; new files only.
